

FIELD SERVICE AUTOMATION SOFTWARE FOR OIL & GAS

Plan, Track and Manage Your Oilfield Operations

The ever-fluctuating nature of the oil & gas industry means you need more than just an edge to contend in a competitive market. All the while you also must adhere to safety and compliance regulations every step of the way. With Field Squared, you gain real-time insight across all your assets, technicians and every inch of the thousands of miles of pipeline and wells you maintain.

Field Squared is the industry's first unified Field Service Automation Platform. As a cloud-based SaaS solution, Field Squared allows enterprises to completely automate and streamline their field service operations and business processes, from the frontline to back-office systems.

Key Benefits

- Increase pad site inspection efficiency
- Automate manual processes on the rig or at the refinery
- Shorten project cycle times
- Optimize productive wells and eliminate unprofitable assets

Key Capabilities

- Asset Management
- Field Data Capture via Smart Forms
- Real-Time Notifications
- Online & Offline Availability
- Analytics, Reporting & Business Intelligence
- Mobile Application
- Integrate with Back-Office Systems

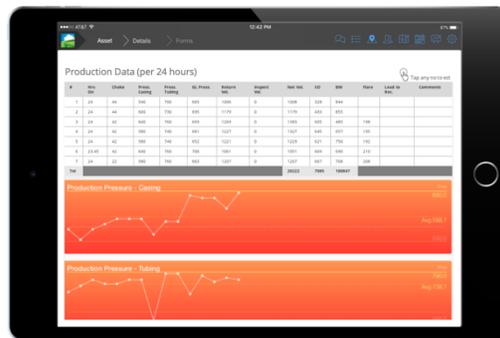

Increase Plant Rounds and Inspection Efficiency

- Automate existing manual processes across upstream, midstream and downstream operations
- Instantly share pressure readings, run tickets and create work requests across your back-office systems
- Effortlessly schedule recurring maintenance and operations tasks, such as plant rounds and environmental inspections

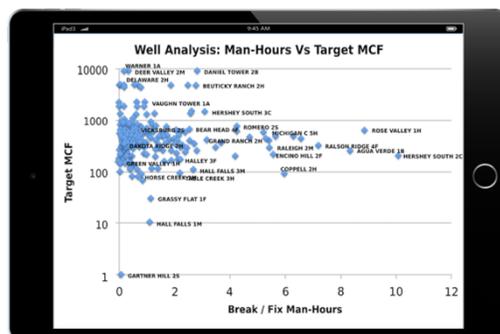

Automate, Manage & Mobilize Asset Monitoring

- Remotely monitor and respond to asset conditions (i.e., pressure, temperature, NOX/O2)
- Visualize sensor data to ensure you stay within acceptable range
- Remain compliant and avoid fines via recurring automated environmental inspection tasks

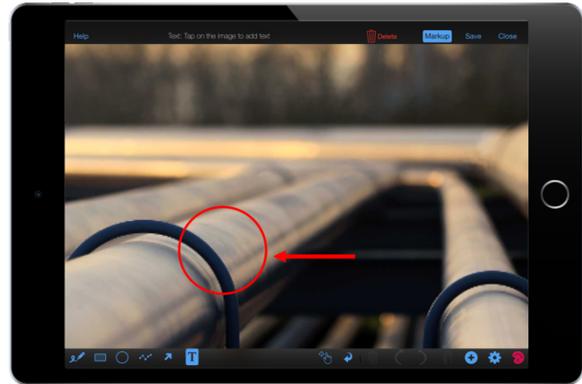

Measure Your Oilfield Service Performance

- Analyze well metrics to optimize and prioritize assets
- Understand fuel consumption rates
- Visualize sensor data to ensure you stay within acceptable range
- Analyze metrics to help reduce travel time

Increase Field Data Capture Accuracy

- Capture field data and automate business processes with digital Smart Forms
- Online and offline availability, sync all data when connection is restored
- Easily include photos, markup, annotations, and site sketches with work orders and assets
- Pull lookup values and catalogues from third-party systems

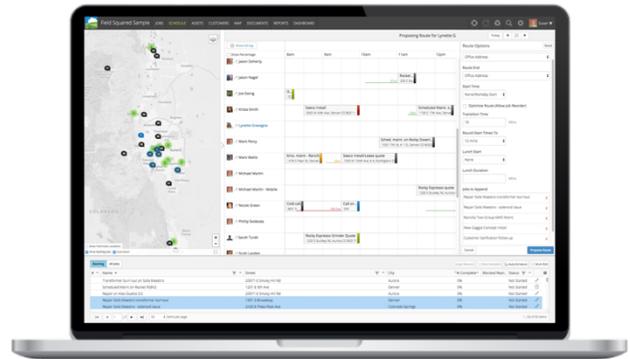

Schedule, Dispatch & Optimize Routes

- Easily schedule recurring maintenance and operations tasks
- Quickly assign scheduled work orders across your own internal staff as well as contractors
- Match the right technician to work orders with skills tagging
- Leverage team-based scheduling, allowing team leaders to manage and assign jobs

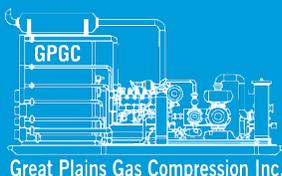

Track Progress and Crews in Real-Time

- Enhance first call resolution performance metrics with real-time GPS team tracking
- Access a historical replay of your field workforce locations and work orders
- Improve customer service experience with automated status alerts
- Effectively plan projects using satellite photos and street maps, driving directions and GPS

Collaborate in Real-Time

- Collaborate one-on-one or in team/group conversations
- Message links to work orders, assets, customer records and digital forms
- Access a full conversation history to reduce knowledge gaps
- Enable push notifications

“ We’ve seen over a 4000% increase in productivity since rolling out Field Squared.

William Morgan, Implementation Specialist at Great Plains Gas
